## Amendments to the Specification

Please amend the paragraph beginning on line 5 of page 10 as follows:

Meanwhile, when a guard component  $L_{GUARD}$  having a size of  $\frac{N}{2} \times L_{GUARD}$  is inserted after or before  $C^N$  and  $S^N$  for generating the IFW, an orthogonal spreading code can be expressed as in Equation 2, wherein the length of a code is  $N+2\times L_{GUARD}$ , [[m]]  $\underline{N}$  is a natural number at least 2, and the length of guard component is an integer at least 0.

$$LS^{N+2\times L_{GUARD}} = \begin{bmatrix} 0^{L_{GUARD}} & C^{N} & 0^{L_{GUARD}} & S^{N} \\ 0^{L_{GUARD}} & C^{N} & 0^{L_{GUARD}} & -S^{N} \end{bmatrix}$$

$$= \begin{bmatrix} LS^{N+2\times L_{GUARD}} \\ \vdots \\ LS^{N+2\times L_{GUARD}} \\ \vdots \\ LS^{N+2\times L_{GUARD}} \\ \vdots \\ LS^{N+2\times L_{GUARD}} \end{bmatrix} \dots \text{ Equation 2.}$$
